

My Services

🗣️ Voice & Vision Agents

Build conversational AI agents with real-time voice, video understanding, and emotional intelligence.

- **Technology:** LiveKit Agents, Gemini Live API, OpenAI Realtime API
- **Use Cases:** Customer support, field assistance, sales qualification, appointment scheduling
- **Key Features:** 24/7 availability, natural conversations, emotional intelligence

🤖 Multi-Agent Orchestration Systems

Deploy teams of specialized AI agents that collaborate like human teams.

- **Technology:** LangGraph, CrewAI, Microsoft Agent Framework (MAF), Swarms
- **Use Cases:** Lead generation, content production, research synthesis, code review
- **Key Features:** Role-based agents, human-in-the-loop, state management, cost-efficient orchestration

📄 Secure Document Intelligence (RAG)

Build private, hallucination-controlled document Q&A systems.

- **Technology:** LlamaIndex, RAGFlow, SplatRag, R2R, AWS Bedrock Knowledge Bases
- **Use Cases:** Legal contract analysis, internal knowledge bases, customer support, regulatory compliance
- **Key Features:** State-of-the-art retrieval, 3x faster ingestion, PII redaction, VPC self-hosting

⚙️ AI Automation & Workflow Pipelines

Automate repetitive business processes with intelligent pipelines.

- **Technology:** N8N, LangGraph, CrewAI, AWS Lambda
- **Use Cases:** Lead qualification, CRM updates, email automation, data migration, report generation
- **Key Features:** Visual workflow builder, human-in-the-loop, observability, cost optimization

🧠 Custom AI Model Fine-Tuning

Train models on proprietary data for your specific domain.

- **Technology:** Amazon SageMaker, NVIDIA DGX Cloud, NVIDIA NeMo, Reinforcement Fine-Tuning (RFT)
- **Use Cases:** Domain-specific expertise, model sovereignty, cost optimization

- **Key Features:** Self-optimization, GPU/Inferentia support, enterprise-grade security

📞 Self-Hosted Telephony & SIP Integration

Bridge AI agents directly to phone networks.

- **Technology:** active-call (Rust), Voxtra (Python), OpenAI Realtime API SIP

- **Use Cases:** Contact centers, IVR systems, appointment scheduling, multilingual customer service

- **Key Features:** Ultra-low latency, TLS/SRTP encryption, fully self-hosted
